Portfolio: jnalewajk.me

AVAILABILITY

Location: Warsaw, Poland
Job type: Full-time
Available: 2 weeks' notice

SKILLS

Languages
TypeScript, JavaScript, HTML, CSS, SQL

Backend
Node.js, NestJS, Express, REST API, OpenAPI, Strapi

Data & Queues
PostgreSQL, MongoDB, Redis, BullMQ, Prisma, Drizzle ORM, Supabase

Frontend
React, Next.js, Astro, TanStack Query, Zustand, React Hook Form, Zod, nuqs

AI & Agents
Vercel AI SDK, Claude Code, Codex, pi, MCP, Docker Sandboxes

Styling & UI
Tailwind CSS, Sass, Radix, Ark UI, Shadcn UI, Storybook

Testing
Vitest, Testing Library, Playwright

Architecture & Tooling
Nx, Turborepo, Docker, Git, GitHub Actions, AWS (Amplify, CloudWatch), Azure DevOps

LANGUAGES

- Polish - Native
- English - C1

EDUCATION

WSB Merito University
Engineer's degree, Computer Science
January 2023 - July 2026
Completed while working full-time

PROFILE

Fullstack developer with 3 years of commercial experience in TypeScript, Node.js, NestJS and Next.js. Promoted to fullstack after 12 months at Haergi, and took over a client platform end to end within 3 months at CodeYourBrand. I build **fleet**, an open-source tool that runs coding agents in parallel sandboxes and ships their work as reviewed pull requests.

WORK EXPERIENCE

Fullstack Developer July 2026 - present
autoMEE | Full-time | Remote

- Built frontend and backend features for **flowMEE**, an AI accounting platform that books documents and reconciles them with bank statements.
- Worked on the **document approval workflow** and **bank statement reconciliation**.
- Worked on integrations with **KSeF**, the Polish national e-invoicing system, and with ERP accounting systems.

Mid Fullstack Developer October 2025 - present
CodeYourBrand | Part-time since July 2026 | Remote

Mid Fullstack Developer January 2026 - present

- Sole developer on **dubaj.estate**, a Dubai real estate platform: architecture, release process and stakeholder communication.
- Introduced the team's **AI coding workflow**: shared Claude Code configuration, custom commands and the documentation it operates against.
- Co-designed the platform as **5 vertical domain modules** over four layers, with dependencies pointing one way down (Nx, Next.js, Strapi CMS).
- Shipped new features for **Parkingowo** (Next.js, NestJS) across API endpoints, the data layer and the UI.
- Wrote **490+** unit, integration and e2e tests for dubaj.estate (Vitest, Testing Library, Playwright).
- Configured production hosting on **AWS Amplify** for the Next.js app and Strapi CMS, with per-stage environment configuration and CloudWatch debugging.
- Added **visual regression testing** to CI: every PR diffs screenshots against a baseline, catching **3+ layout regressions**, and Lighthouse checks on **7 paths** hold **94+ performance and accessibility**.

Mid Frontend Developer October 2025 - January 2026

- Rebuilt and tested the **Maspex Photo Service** app and admin panel for a major FMCG company as its only frontend developer, cutting bundle size **~30%**.

Fullstack Developer August 2023 - October 2025
Haergi | Warsaw, Poland

Fullstack Developer August 2024 - October 2025

- Developed the fullstack **LeadMe AI** platform, a SaaS for automating customer tasks and tracking operations (React, React Query, Express).
- Created **InstagoAI**, an AI website builder for small businesses, owning auth, API, frontend, data modeling and AI workflows (Next.js, Express, MongoDB).
- Launched a B2B e-commerce platform for **Mezze Foods** on InstagoAI, integrated with LeadMe AI for orders, invoicing and messaging at **3,500+ orders/month**.
- Wrote an **i18n tool** for CI/CD that generated translations for **15+ languages** across **~1,500 keys**, removing manual translation work from all company projects.

Frontend Developer August 2023 - August 2024

PROJECTS

fleet September 2026 - present
Open source, used daily in my commercial work | github.com/jagubowsky/fleet

- Built an agent orchestration CLI: a host agent gives each issue its own **Docker sandbox** with Claude Code or pi, watches them all and lands the pull requests (TypeScript, Node.js, **570+ tests**).
- Designed the sandbox run: tickets, **TDD**, review by a fresh agent that never saw the code, and a browser screenshot per acceptance criterion.
- Wrote a **policy guard** that checks every agent tool call against per-repository permissions, blocking force pushes, secret reads and edits to its own rules.
- Ran **140+ tasks** through it across 6 repositories; a self-audit scores agent transcripts against the rules and turns violations into fixes.
