

Jakub Nalewajk

Fullstack Developer

DETAILS

Email: kontakt@jnalewajk.me
Phone number: +48 797 634 248
GitHub: github.com/jagubowsky
LinkedIn: linkedin.com/in/jakub-nalewajk
Portfolio: jnalewajk.me

AVAILABILITY

Location: Warsaw, Poland
Job type: Full-time
Available: 2 weeks' notice

SKILLS

Languages
TypeScript, JavaScript, HTML, CSS, SQL

Backend
Node.js, NestJS, Express, REST API, OpenAPI, Strapi

Data & Queues
PostgreSQL, MongoDB, Redis, BullMQ, Prisma, Drizzle ORM, Supabase

Frontend
React, Next.js, Astro, TanStack Query, Zustand, React Hook Form, Zod, nuqs

Styling & UI
Tailwind CSS, Sass, Radix, Ark UI, Shadcn UI, Storybook

Testing
Vitest, Testing Library, Playwright

Architecture & Tooling
Nx, Turborepo, Docker, Git, GitHub Actions, AWS (Amplify, CloudWatch), Azure DevOps

AI Tools
Vercel AI SDK, Claude Code, Cursor, Codex

Other
Accessibility, Internationalization, Figma

LANGUAGES

- Polish - Native
- English - C1

EDUCATION

WSB Merito University
Engineer's degree, Computer Science
01/2023 – 07/2026 (defended)

HOBBIES

- Powerlifting
- Traveling
- Healthy cooking

PROFILE

Fullstack developer with 3 years of commercial experience across Node.js, NestJS and Next.js, promoted to **fullstack after 12 months** at Haergi and to **Project Lead after 3 months** at CodeYourBrand. Sole developer on a client platform built as an Nx monorepo, owning architecture, release process and stakeholder communication, and setting up the team's **AI coding workflow** in the repo. Now in a **finance and accounting SaaS**, shipping across domain logic, API integrations and the data layer.

WORK EXPERIENCE

Fullstack Developer

autoMEE | July 2026 - present | Full-time

- Development of a **finance and accounting SaaS**: frontend and backend features plus **API integrations**.
- Work on document handling, settlements, currencies and accounting processes.
- Integrations with banking services and **open banking**, including transaction import.
- Diagnosing and fixing production bugs, regressions and data issues.
- Contributed to rolling features out to **international markets**.

Frontend Developer / Project Lead

CodeYourBrand | October 2025 - present | Part-time since July 2026

Project Lead (January 2026 - present)

- Sole developer on **dubaj.estate**, a Dubai real estate platform: architecture, release process and stakeholder communication. Set up tagged releases with generated changelogs, branch protection and rulesets enforcing review before merge.
- Co-designed the platform as **5 vertical domain modules** over four layers, dependencies pointing one way down so no module reaches into another's internals (Nx, Next.js, Strapi CMS).
- Set up the team's **AI coding workflow** in the repo: shared configuration, custom commands and conventions for working with Claude Code, plus the documentation it operates against.
- Shipped new features for **Parkingowo** (Next.js, NestJS) across API endpoints, the data layer and the UI.
- Wrote the **unit, integration and e2e** suites for dubaj.estate, Parkingowo and Maspex, with Vitest, Testing Library and Playwright.
- Configured production hosting: **AWS Amplify** for the Next.js app, Strapi CMS with environment configuration per stage. Debugged production issues from CloudWatch logs.
- Set up **visual regression testing** in CI: every PR diffs rendered screenshots against a baseline, so a layout break fails the build instead of reaching the client. Lighthouse runs in the same pipeline. Renovate with automerge keeps dependencies current without manual triage.

Mid Frontend Developer (October 2025 - January 2026)

- Rebuilt and tested the **Maspex Photo Service** app and its admin panel for a major FMCG company, as the only frontend developer on the project. Optimized bundle size by **~30%**.
- Set up deployment for Maspex: GitHub as the main repo mirrored to **Azure Repos** required by the client, with pipelines deploying to dev and production on trigger.
- Delivered both three-month milestones **ahead of schedule**, which led to **promotion to Project Lead** within 3 months.

Fullstack Developer

Haergi | August 2023 - October 2025 | Warsaw, Poland

Fullstack Developer (August 2024 - October 2025)

- Developed the fullstack **LeadMe AI** platform, a SaaS for automating customer tasks and tracking operations (React, React Query, Express).
- Created **InstagoAI** from scratch, an AI website builder for small businesses (Next.js, Express, MongoDB, TypeScript). Owned the full stack: auth, backend, frontend, database modeling, AI workflows.
- Developed a B2B e-commerce platform for **Mezze Foods** (Warsaw restaurant) on top of InstagoAI, integrated with LeadMe AI for orders, invoicing, and client messaging, at **3,500+ orders/month**.
- Wrote an **i18n tool** for CI/CD that generated translations for **15+ languages** across **~1,500 keys**, removing manual translation work from all company projects.

Frontend Developer (August 2023 - August 2024)

- Delivered **3 landing pages** for startup products with responsive UIs scoring **90+ on Lighthouse** (performance & accessibility).
